

Reportable Diseases/Conditions in Florida

Laboratory List (Practitioner Requirements Differ)

Effective June 4, 2014

Did you know that you are required* to report certain laboratory results to your local county health department (CHD)?

You are an invaluable part of disease surveillance in Florida!

Please visit <http://floridahealth.gov/diseasereporting> for more information. To report a laboratory result, contact your local CHD epidemiology program (<http://floridahealth.gov/chdepcontact>). If unable to reach your CHD, please call the Bureau of Epidemiology at (850) 245-4401.

- ! Report immediately 24/7 by phone upon initial suspicion or laboratory test order
- 📞 Report immediately 24/7 by phone
 - Report next business day
 - + Other reporting timeframe
- 📧 Submit isolate or specimen for confirmation

! Detection in one or more specimens of etiological agents of a disease or condition not listed that is of urgent public health significance; agents suspected to be the cause of a cluster or outbreak

Arboviruses

- Arboviruses not otherwise listed, including but not limited to: Flaviviridae, Togaviridae (e.g., Western equine encephalitis virus), and Bunyaviridae 📧
- California serogroup viruses (e.g., Jamestown Canyon, Keystone, Lacrosse) 📧
- Chikungunya virus
- Dengue virus 📧
- Eastern equine encephalitis virus 📧
- St. Louis encephalitis virus 📧
- West Nile virus 📧

! Venezuelan equine encephalitis virus 📧

General

- 📞 *Acanthamoeba* species
- *Anaplasma* species 📧
- Any bacterial or fungal species in CSF
- Arsenic results indicative of poisoning
- ! *Bacillus anthracis* 📧
- 📞 *Balamuthia mandrillaris*
- 📞 *Bordetella pertussis*
- *Borrelia burgdorferi*
- 📞 Brevetoxin associated with neurotoxic shellfish poisoning
- ! *Brucella* species 📧
- ! *Burkholderia mallei* 📧
- ! *Burkholderia pseudomallei* 📧
- *Campylobacter* species
- + Cancer, pathological or tissue diagnosis of cancer, excluding non-melanoma skin cancer and including benign and borderline intracranial and CNS tumors (see Rule 64D-3.034, *Florida Administrative Code*)
- Carbon monoxide, volume fraction ≥ 0.09 (9%) of carboxyhemoglobin in blood
- + CD-4 absolute count and percentage of total lymphocytes
- *Chlamydia trachomatis*
- *Chlamydia psittaci* 📧
- CJD, 14-3-3 or tau protein detection in CSF or immunohistochemical test or any brain pathology suggestive of CJD
- ! *Clostridium botulinum* and botulinum toxin from food, wound or unspecified source 📧
- *Clostridium botulinum* and botulinum toxin from infants <12 months old 📧
- *Clostridium tetani*
- ! Coronavirus associated with severe acute respiratory disease 📧
- ! *Corynebacterium diphtheriae* 📧
- *Coxiella burnetii* 📧
- *Cryptosporidium* species

- *Cyclospora cayatanensis* 📧
- *Ehrlichia* species 📧
- *Escherichia coli*, Shiga toxin-producing 📧
- ! *Francisella tularensis* 📧
- *Giardia* species
- *Haemophilus ducreyi*
- ! *Haemophilus influenzae* isolated from a normally sterile site from children <5 years old 📧
- 📞 *Hantavirus* 📧
- 📞 *Hepatitis A*
- Hepatitis B, C, D, E, and G viruses
- Hepatitis B surface antigen (HBsAg)
- Herpes simplex virus (HSV) 1 and HSV 2 from children <12 years old
- + Human immunodeficiency virus (HIV) test results (e.g., positive and negative immunoassay, positive and negative virologic tests) from children <18 months old
- + HIV, repeatedly reactive enzyme immunoassay, followed by a positive confirmatory test (e.g., Western blot, IFA). Positive result on any HIV virologic test (e.g., p24 AG, Nucleic Acid Test (NAT/NAAT) or viral culture). All viral load (detectable and undetectable) test results.
- 📞 Influenza virus from children <18 years old who died (if known) 📧
- ! Influenza virus, novel or pandemic strain isolated from humans 📧
- *Klebsiella granulomatis*
- Lead, all blood results (positive and negative)
- *Legionella* species
- *Leptospira interrogans*
- 📞 *Listeria monocytogenes* 📧
- ! Measles virus 📧
- Mercury results indicative of poisoning
- Mumps virus
- *Mycobacterium leprae*
- *Mycobacterium tuberculosis* complex 📧
- 📞 *Naegleria fowleri*
- *Neisseria gonorrhoeae*
- 📞 *Neisseria meningitidis* isolated from a normally sterile site 📧
- Pesticide results indicative of related illness and injury
- *Plasmodium* species 📧
- ! Poliovirus 📧
- ! Rabies virus from animal or human
- ! Ricinine (from *Ricinus communis* castor beans) 📧
- ! *Rickettsia prowazekii* 📧
- *Rickettsia rickettsii* and other spotted fever *Rickettsia* species 📧
- ! Rubella virus 📧
- 📞 *Salmonella* serotype Typhi 📧
- *Salmonella* species

- Saxitoxin associated with paralytic shellfish poisoning
- Shiga toxin 📧
- *Shigella* species
- 📞 Staphylococcal enterotoxin B 📧
- 📞 *Staphylococcus aureus*, intermediate or full resistance to vancomycin (VISA, VRSA) 📧
- *Streptococcus pneumoniae* isolated from a normally sterile site from children <6 years old
- *Treponema pallidum*
- 📞 *Treponema pallidum* from pregnant women and neonates
- *Trichinella spiralis*
- ! *Vaccinia virus* 📧
- Varicella virus
- ! *Variola virus* (orthopox virus) 📧
- 📞 Yellow fever virus 📧
- ! *Yersinia pestis* 📧

Vibrio and related species

- ! *Vibrio cholerae* type O1 📧
- *Vibrio* species excluding *Vibrio cholerae* type O1 📧
- *Photobacterium damsela* (formerly *Vibrio damsela*) 📧
- *Grimontia hollisae* (formerly *Vibrio hollisae*) 📧

Viral hemorrhagic fever

! Viruses not listed that cause viral hemorrhagic fever 📧

! Arenaviruses (e.g., Lassa, Machupo, Lujo, new world) 📧

! Filoviruses (e.g., Ebola, Marburg) 📧

Only reportable for laboratories participating in electronic laboratory reporting (ELR)

- Antimicrobial susceptibility results for isolates from a normally sterile site for *Acinetobacter baumannii*, *Citrobacter* species, *Enterococcus* species, *Enterobacter* species, *Escherichia coli*, *Klebsiella* species, *Pseudomonas aeruginosa*, and *Serratia* species
- *Haemophilus influenzae* isolated from a normally sterile site, all ages
- Hepatitis B, C, D, E, and G viruses, all test results (positive and negative) and all liver function tests
- Human papillomavirus (HPV) DNA
- Influenza virus, all test results (positive and negative)
- Respiratory syncytial virus, all test results (positive and negative)
- *Staphylococcus aureus* isolated from a normally sterile site
- *Streptococcus pneumoniae* isolated from a normally sterile site, all ages

*Section 381.0031 (2), *Florida Statutes* (F.S.), provides that "Any practitioner licensed in this state to practice medicine, osteopathic medicine, chiropractic medicine, naturopathy, or veterinary medicine; any hospital licensed under part I of chapter 395; or any laboratory licensed under chapter 483 that diagnoses or suspects the existence of a disease of public health significance shall immediately report the fact to the Department of Health." Florida's county health departments serve as the Department's representative in this reporting requirement. Furthermore, Section 381.0031 (4), F.S. provides that "The department shall periodically issue a list of infectious or noninfectious diseases determined by it to be a threat to public health and therefore of significance to public health and shall furnish a copy of the list to the practitioners..."
